# What can be visualized ?

- **Simulation data** can be visualized
  - Geometrical components
  - Particle trajectories and tracking steps
  - Hits of particles in the geometry
  - Scored energy, dose, etc.
- Other user defined objects can also be visualized
  - Polylines
    - such as coordinate axes
  - 3D Markers
    - such as eye guides
  - Text
    - descriptive character strings
    - comments or titles

# A **variety** of choices

Driver	Variant	Hight quality print	Interactive	browse geometry hierarchies	Direct access to G4 kernel	Make movies	Web
OpenGL	X						
	Xm						
	Qt						
	Win32						
OpenInventor	Xt						
	Win32						
DAWN							
VRML							
HepRep							
gMocren							
RayTracer							
ACSII File							

Comput. Phys. Comm. 178 (2008) 331-365

# Controlling **visualization**

- Your Geant4 code **stays basically the same** no matter which driver you use
- Visualization is performed either with commands or from C++ code
  - For the present tutorial, we confine ourselves to command-driven visualization.
- Some visualization drivers work directly **from Geant4**
  - OpenGL
  - OpenInventor
  - RayTracer
  - ASCII Tree
- For other visualization drivers, you first have **Geant4 produce a file**, and then you have that file **rendered by another application** (which may have GUI control)
  - HepRepFile
  - DAWNFILE
  - VRML2FILE
  - gMocrenFile
- You can open more than one drivers at a time
  - For example, do a quick check in OpenGL, then save the same event for a beautiful DAWN plot

# Controlling **which drivers are available**

- **Six** of the visualization drivers are **always included by default** (since they require no external libraries):
  - HepRepFile
  - DAWNFILE
  - VRMLFILE
  - RayTracer
  - gMocrenFile
  - ASCIITree
- Other visualization drivers are included **only if you request them in your cmake** options.
- You can also add your own visualization driver
  - Geant4's visualization system is modular.  
By creating just three new classes, you can direct Geant4 information to your own visualization system.

# Simplest command example

---

- Visualize your geometry in OpenGL
  - /vis/open OGL
  - /vis/drawVolume
- Most examples come with a **visualization macro**
  - good starting point

# Screenshots on the visualization drivers

- Qt with OpenGL
  - Requires that you install Qt
  - Visualization driver + user interface
  - You can customize the interface to control any Geant4 command
- OpenGL
- OpenInventor
- HepRep
- DAWN
- VRML
- RayTracer
- gMocren
- ASCIITree

# 1) Qt Driver with OpenGL visualization

---

- Recent developments focused on Qt User Interface and Visualization
- Demo...

## 2) OpenGL

- /vis/open OGL
- Features
  - Control directly from Geant4
  - Uses GL libraries that are already included on most Linux and Windows systems
  - Rendered, photorealistic image with some interactive features
    - zoom, rotate, translate
  - Fast response (can usually exploit full potential of graphics hardware)
  - Save as pixel graphics or vector EPS
  - Live movies

# OpenGL with **Motif Control**

- Somewhat obsolete now that Qt can take over this functionality
  - but still supported
  - requires that you have Motif and link against this in your Geant4

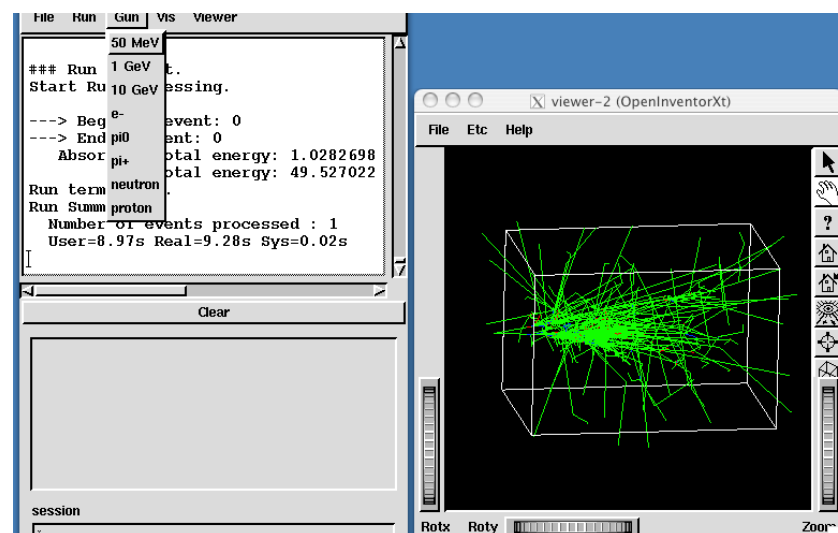

### 3) OpenInventor

- `/vis/open OIX` or `/vis/open IOWin32`

- Features

- Control from the OpenInventor GUI
- Requires addition of OpenInventor libraries (freely available for most Linux systems and Windows)
- Rendered, photorealistic image
- Many interactive features
  - zoom, rotate, translate
  - click to “see inside” opaque volumes
  - click to show attributes (momentum, etc., dumps to standard output)
- Fast response (can usually exploit full potential of graphics hardware)
- Expanded printing ability (vector and pixel graphics)

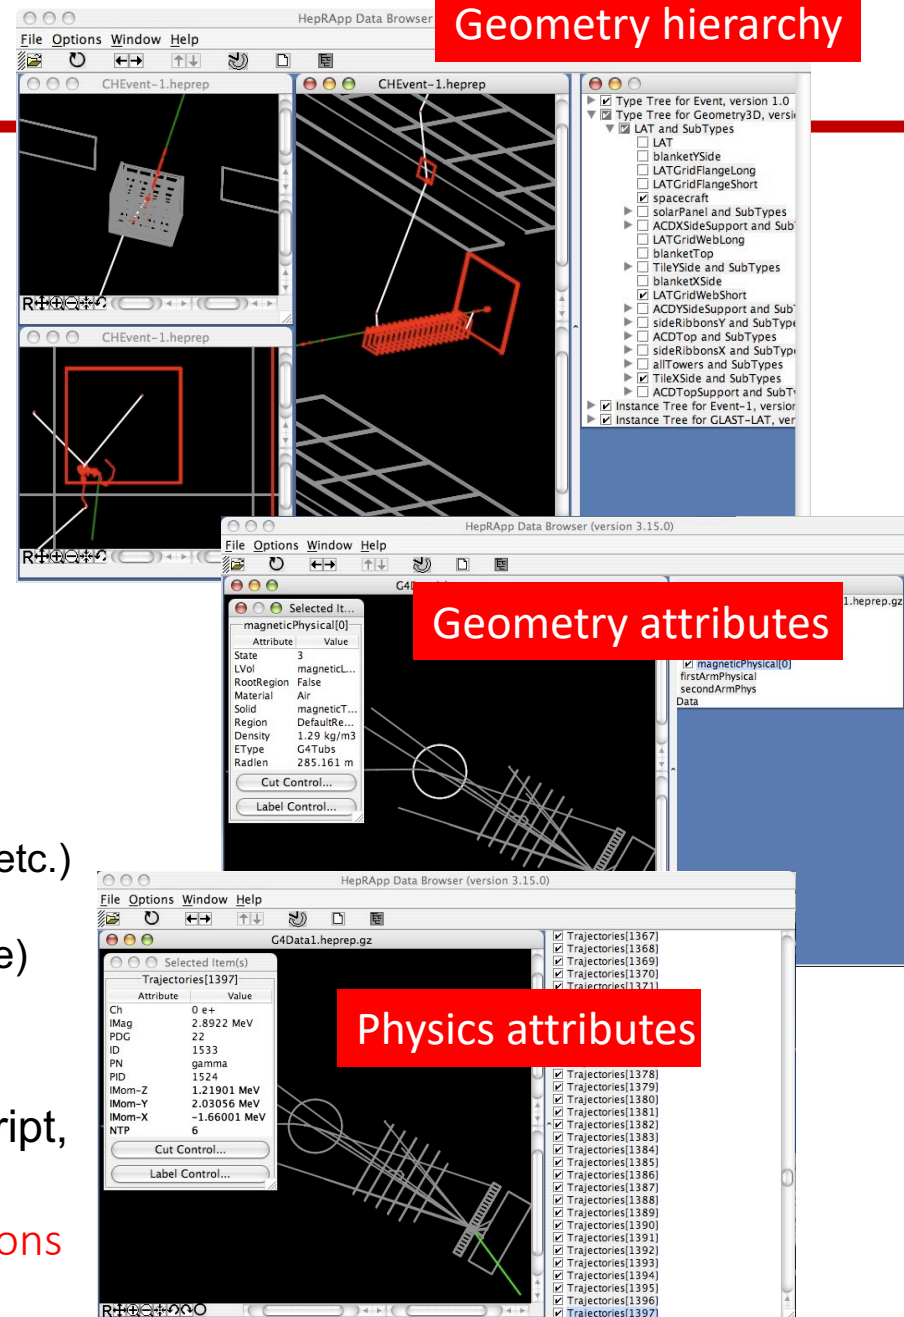

Warning: OpenScientist (implementing our OI driver) is discontinued, but you could still try to use it

## 4) HepRep

- /vis/open HepRepFile
- Features
  - Create a file to view in the
    - HepRApp HepRep Browser
    - WIRED4 JAS Plugin
    - or FRED Event Display
  - Requires one of the above browsers (freely available for all systems)
  - Wireframe or simple area fills (not photorealistic)
  - Many interactive features
    - zoom, rotate, translate
    - click to show attributes (momentum, etc.)
    - special projections (FishEye, etc.)
    - control visibility from hierarchical (tree) view of data
  - Hierarchical view of the geometry
  - HepRApp and WIRED4 can export to many vector graphic formats (PostScript, PDF, etc.)

Warning: Issues with recent java versions  
being worked out

## 5) DAWN

- `/vis/open DAWNFILE`
- Features
  - Create a .prim file
  - Requires DAWN, available for all Linux and Windows systems
  - DAWN creates a rendered, photorealistic PostScript image
  - No interactive features once at PostScript stage
  - Highest quality technical rendering - vector PostScript
  - View or print from your favorite PostScript application

[http://geant4.kek.jp/~tanaka/GEANT4/ATLAS\\_G4\\_GIFFIG/](http://geant4.kek.jp/~tanaka/GEANT4/ATLAS_G4_GIFFIG/)

# DAWNCUT and DAVID

- A standalone program, **DAWNCUT**, can perform a planar cut on a DAWN image
  - DAWNCUT takes as input a .prim file and some cut parameters. Its output is a new .prim file to which the cut has been applied.
- Another standalone program, **DAVID**, **can show you any volume overlap errors** in your geometry
  - DAVID takes as input a .prim file and outputs a new .prim file in which overlapping volumes have been highlighted.

<http://geant4.kek.jp/~tanaka/>

## 6) VRML

- `/vis/open VRML1FILE` or `/vis/open VRML2FILE`
- Features
  - Create a file to view in any VRML browser (some as web browser plug-ins)
  - Requires VRML browser (many different choices for different operating systems)
    - [FreeWRL](#)
  - Rendered, photorealistic image with some interactive features
    - zoom, rotate, translate
  - Limited printing ability (pixel graphics, not vector graphics)

## 7) RayTracer

- `/vis/open RayTracer`
- Features
  - Create a jpeg file (and with RayTracerX option, also draws to x window)
  - Forms image by using Geant4's own tracking to follow photons through the detector
  - Can show geometry but not trajectories
  - Can render any geometry that Geant4 can handle (such as Boolean solids) - no other Vis driver can handle every case
  - Supports shadows, transparency and mirrored surfaces

# RayTracerX

- You have the option of
  - `/vis/open RayTracerX`
- Builds same jpeg file as RayTracer, but simultaneously renders to screen so you can watch as rendering grows progressively smoother
- Means you can abort and retry the rendering with different view parameters without having to wait for the complete refinement of the image

## 8) gMocren

- Great tool available for volume visualization
- From JST/CREST project (Japan) to improve Geant4 for medical physics
- Able to visualize
  - Volume data (including overlay of more than one set)
  - Trajectories
- Runs on
  - Based on a commercial package but offered freely to all Geant4 users
  - <http://geant4.kek.jp/gMocren>
  - Installation is straightforward, follow the Download link on the above page
    - First run gMocren's one-click installer
    - Then, inside <gMocren-dir>/gtk, you will find the one-click installer for gtk
- To export Geant4 visualization to gMocren files
  - `/vis/open gMocrenFile`
  - `/vis/scene/add/psHits`
  - `/vis/viewer/flush`
  - many other options available with `/score/draw ...` commands

## 9) ASCII Tree

- `/vis/open ATree`
- Features
  - Text dump of the geometry hierarchy
  - Not graphical
  - Control over level of detail to be dumped
  - Can calculate mass and volume of any hierarchy of volumes

`/vis/viewer/flush`

```
"worldPhysical":0
"magneticPhysical":0
"firstArmPhysical":0
"hodoscope1Physical":0
"hodoscope1Physical":1 (repeated placement)
"hodoscope1Physical":2 (repeated placement)
"hodoscope1Physical":3 (repeated placement)
"hodoscope1Physical":4 (repeated placement)
```

Can be set to **various levels of detail**

`/vis/ASCIITree/verbose <verbosity>`

0: prints physical volume name.  
1: prints logical volume name.  
2: prints solid name and type.  
3: prints volume and density of solid.  
4: calculates and prints mass(es) of volume(s) in scene.

By default, shows only daughters of first placement and not repeat replicas.

Add 10 to the above to also show repeated placements and replicas.

# Movies: time development of the event

- You can make movies that show time development of an event
  - i.e., a shower in slow motion
- Based on technique of “time-slicing”, breaking trajectories into individual slices, each with a time attribute.
  - requires some visualization features, rich trajectory and some extensions to the OpenGL driver
  - you can run these animations Directly from Geant4, does NOT involve stitching together a movie by hand
- A collection of example movies has been prepared by John Allison:  
<http://www.hep.man.ac.uk/u/johna/pub/Geant4/Movies/>
